Huma-Force

3% Labile Carbon - 7% Stable Carbon

Huma-Force is a organic formulation containing humic acid with 3% Labile Carbon and 7 % Stable Carbon (3% Nitrogen & 3% Potassium) tailored to suit a broad range of soil types.

Huma-Force can extend the life of soil-applied nitrogen, phosphorus, potassium and zinc, as well as release many soil nutrients that may be currently unavailable to the plant.

Huma-Force is a powerful chelating tool and a powerful soil micro-bial stimulant that promotes a strong and healthy root growth, which also provides a food source for beneficial insects.

The Important Features of Huma-Force

- Makes available its own ionic nutrients and soil nutrients
- Nitrogen in ammonium form, release at a slow rate
- Slow release potassium in a non-leachable form
- Food spray source in an IPM (Integrated Pest Management) Strategy
- Less ratio of application due to its special elements composition
- Protects seeds from fungal attack
- Provides a nutritional boost at seed germination

The Benefits of Huma-Force

- Improves soil microbe activity
- Increase germination percentage and seedling vigor
- Offset the effects of a high sodium presence in the soil
- Offset the effects of a high chloride soil profile
- Stimulates cell elongation and division
- Increase soil moisture retention
- Reduce granulated fertiliser application and less soil pollution

Application Rates of Huma-Force

- **For Seed Protection & Soil Application** - 5 to 10 Litres per Hectare
- **Fruit Crops** - 2- 4 applications per year at 7 Litres per Hectare per application
- **Field Crops** - 2 application per season at 5 - 10 Litres per Hectare per application
- **Horticultural Crops, Pastures & Lawns** - 5 Litres per Hectare every 15 days
- **Companion & Food Spray** - 3 - 3.5 Litres per Hectare
- **Stubble Breakdown** - 10 - 20 Litres per Hectare plus 25 - 50 Kg of Ammonium Sulphate
